

NICOLA MINING INC.

August 29, 2017

MANAGEMENT'S DISCUSSION & ANALYSIS

For The Three and Six Months Ended June 30, 2017

NICOLA MINING INC.
MANAGEMENT'S DISCUSSION & ANALYSIS
For The Three and Six Months Ended June 30, 2017
(Prepared by Management)

GENERAL

The following discussion of financial performance, financial condition, cash flows and future prospects ("MD&A") should be read in conjunction with the audited consolidated financial statements of Nicola Mining Inc. ("Nicola" or the "Company") and notes thereto for the year ended December 31, 2016 and the unaudited condensed consolidated interim financial statements for the three and six months ended June 30, 2017.

This MD&A for the three and six months ended June 30, 2017 was prepared as of August 29, 2017. Unless otherwise indicated, all dollar amounts set out herein are expressed in Canadian dollars. Additional information and filings are available for review on the Company's SEDAR profile at www.sedar.com.

CAUTIONARY NOTE REGARDING FORWARD-LOOKING STATEMENTS

Certain statements in this MD&A are forward-looking statements, which reflect management's expectations regarding the future growth, results of operations, performance and business prospects and opportunities of the Company, including (i) that Nicola or another party may be able to recommence operations at its Treasure Mountain Project, (ii) that Nicola will be able to close future financings, (iii) that Nicola will be able to continue to process mill feed in its Merritt Mill for third parties and move towards commissioning, (iv) that Nicola will be able to sell any of its real estate properties or any other non-core assets, (v) that Nicola will be able to close future financings to continue exploration of Thule Copper Property and (vi) that Nicola will enter into any merger and acquisition transactions. Forward-looking statements consist of statements that are not purely historical, including any statements regarding beliefs, plans, expectations or intentions regarding the future. Such statements are subject to risks and uncertainties that may cause actual results, performance or developments to differ materially from those contained in the statements. No assurance can be given that any of the events anticipated by the forward-looking statements will occur or, if they do occur, what benefits the Company will obtain from them. These forward-looking statements reflect management's current views and are based on certain assumptions and speak only as of the date of this MD&A. These assumptions, which include management's current expectations, estimates and assumptions about the Company raising sufficient capital such that it is able to meet its obligations, the Company's ability to recommence operations, including refurbishing and modifying the Merritt Mill to produce other metal concentrates, current mineral property interests, the global economic environment, the market price and demand for silver and other minerals, the Company's ability to manage its property interests and operating costs, and the value of its real property holdings and its non-core assets may prove to be incorrect. A number of risks and uncertainties could cause the Company's actual results to differ materially from those expressed or implied by the forward-looking statements, including: (1) that Nicola or another party will be unable to recommence operations at its Treasure Mountain Project and continue operations at its Merritt Mill for any reason whatsoever, (2) a downturn in general economic conditions in North America and internationally, (3) volatility and fluctuation in the prices of gold silver, lead, zinc and other metals, (4) volatility and fluctuation in the price of the Company's stock and stock of resource issuers generally, and (5) other factors beyond the Company's control. Readers are cautioned that the foregoing list of factors is not exhaustive.

There is a significant risk that such forward-looking statements will not prove to be accurate. Investors and shareholders are cautioned not to place undue reliance on these forward-looking statements. No forward-looking statement is a guarantee of future results. The Company disclaims any intention or

obligation to update or revise any forward-looking statements, whether as a result of new information, future events or otherwise, except as required by law. Additional information about these and other assumptions, risks and uncertainties are set out in the section entitled “Risk Factors” below

This section is qualified in its entirety by the material documents in connection with the CCAA proceeding, including the Court orders, copies of which have been filed and are available under the Company’s profile on SEDAR (www.sedar.com).

Subordinated Secured Convertible Debenture Financing

The Company on November 21, 2014, completed the first tranche (the “First Tranche”) of a convertible debenture financing by issuing subordinated secured convertible debentures (each, a “Debenture”) and common share purchase warrants of the Company (each, a “Warrant”). The Company raised gross proceeds of \$7,000,882 pursuant to the First Tranche.

The Debentures issued in the First Tranche bear interest at a rate of 10% per annum, which interest shall be payable annually as to 50% in cash and 50% by the issuance of common shares of the Company. The Debentures will be repayable on November 21, 2017 (the “Maturity Date”). For each \$1,000 in principal of Debentures, Nicola issued 5,000 Warrants. The Debentures are convertible into common shares at a conversion price of \$0.055 (\$0.275 post share consolidation) per common share prior to the Maturity Date. Each Warrant is exercisable into one additional common share for four years from the date of issuance at an exercise price of \$0.075 (\$0.375 post share consolidation) per common share in the first year after issuance and \$0.10 (\$0.50 post share consolidation) per common share thereafter. The Debentures rank subordinate to the debt owed to Waterton until such time as the debt to Waterton is repaid in full.

On August 29, 2017 the Company announced it intends to amend (the “Amendment”) the secured convertible debentures in aggregate principal amount of \$7,000,882 maturing November 21, 2017 (the “Maturity Date”). It is intended that the following amendments will be made to the Debentures: the conversion price will be reduced to \$0.22 from \$0.275, the Maturity Date will be extended from November 21, 2017 to November 21, 2019, and all of the 7,000,882 Warrants (representing 3.0% on a fully diluted basis) that were issued in connection with the Debentures will be cancelled.

On May 19, 2015, the Company completed the second tranche (the “Second Tranche”) of the Financing by the issuance of subordinated secured convertible debentures and common share purchase warrants of the Company. The Company raised gross proceeds of \$250,000 pursuant to the Second Tranche. The Debentures issued in the Second Tranche have the same terms as the First Tranche except that the Debentures will be repayable on May 19, 2018

Upon repayment by the Company of all amounts owed to Waterton, the holders of the Debentures will be granted an aggregate 2% net smelter returns royalty with respect to the Company’s Treasure Mountain Project, provided that each holder of such Debentures shall only be entitled to their pro rata share of such royalty based on their individual investment.

Impairment of Assets

As at June 30, 2017, the Company’s Merritt Mill was not commissioned and continues to undergo extensive modifications in advance of anticipating receiving mill feed from Gavin Mines Inc. (“Gavin Mines”) in the third quarter of 2017. During 2016 the Company tested approximately 6,000 tonnes under a Milling and Smelting Profit Share Agreement with Gavin Mines. On April 6, 2017, the Company entered into a long-term Mining and Milling Profit Share Agreement with Gavin Mines for up to 40,000 tonnes of mill feed per annum. The Company’s Treasure Mountain Project remains in care and maintenance mode (since June 26, 2013), which is a potential indicator of impairment of the carrying amount of its non-current non-financial assets. The Company carried out a review of the carrying amounts of its non-current non-financial assets.

The remaining carrying value of property, plant, and equipment represented the Company's best estimate of aggregate recoverable value, which has been determined based on fair value less costs to sell. The fair value of each significant asset was determined separately by the Company. The fair value of the Merritt Mill and related lands was determined with references to independent valuations and values of recent sales of similar used equipment. The fair value of the heavy machinery and equipment and remaining land was determined based on values or recent sales of similar assets.

Any significant negative change in the key assumptions made in determining the recoverable amount could result in an additional impairment loss.

Asset Retirement Obligation

As part of the acquisition of Craigmont Holdings Ltd., the Company assumed the asset retirement obligation relating to the Craigmont property and estimated the cost to remediate the Craigmont property at \$900,000. As at June 30, 2017, the Company conducted a review of the estimated reclamation cost to reflect the changes to the Company's current mine permit and has increased the retirement obligation to \$3,072,330 (December 31, 2016 - \$3,032,748). The Company intends to settle the obligation over the mill life of approximately 30 years. The Merritt Mill reclamation costs were adjusted using a long-term inflation rate of 1.4% and then discounted using a risk free rate of 2.34%. In order to obtain its Merritt Mill permit, the Company has posted collateral of \$700,000 with the government to date.

DESCRIPTION OF BUSINESS

Nicola is a junior exploration and custom milling company that is engaged in the business of identification, acquisition, and exploration of mineral property interests together with custom milling operations at its Merritt Mill.

Nicola's Treasure Mountain Project is located northeast of Hope, British Columbia, approximately 3 hours from Vancouver, British Columbia. In November 2011, the Company completed the development of the required infrastructure at the Treasure Mountain Project to begin underground mining on a 10,000 tonne bulk sample permit. In May 2012, the Company received a mining lease covering 335 hectares of active workings out of 2,850 hectares of mineral tenures at the Treasure Mountain Project and a Mines Act permit for the Treasure Mountain Project for the removal of 60,000 tonnes per year of silver/lead/zinc mill feed from the underground mine and the transfer of the mill feed offsite for processing. The Treasure Mountain Project has been in care and maintenance since July 26, 2013. The Company intends to keep the Treasure Mountain Project on care and maintenance and continues to review options for the Treasure Mountain Project, which includes reviewing merger and acquisition opportunities, future exploration, and commencing mining activity on level 1 stope 2 of the Treasure Mountain Project.

Nicola's Merritt Mill is located 14 km northwest of Merritt, British Columbia, approximately 3 hours from Vancouver, British Columbia. The Merritt Mill and property consists of \$8.00 MM for cost of land (900 acres of freehold land), \$21.6 MM for the cost of the mill and related infrastructure, and \$1.8 MM for cost of construction of a fully lined tailings facility. The Merritt Mill was constructed during 2012, and operated from October 2012 to July 26, 2013. The Merritt Mill was permitted for 200 tonne per day silver/lead/zinc processing plant to process mill feed from Treasure Mountain Project. The Merritt Mill entered into care and maintenance on July 26, 2013.

On July 31, 2015, the Company filed a permit amendment application to the existing Mines Act permit for custom milling at the Merritt Mill. The British Columbia Mines Act custom milling operations permit was received on April 15, 2016. It allows the Company to enter into third party custom milling contracts and enables it to mill up to 200 tonnes per day at its Merritt Mill. During fiscal 2016, the Company commenced testing custom milling, processing approximately 6,000 tonnes material received from Gavin Mines with the purpose of moving the Merritt Mill towards commissioning. On August 2, 2016, the Company commenced shipping gold and silver concentrates milled from the Gavin Mines mill feed and entered into an off take agreement with MRI Trading AG. On September 15, 2016, the Company shipped a total of 190 dry metric tonnes of gold and silver concentrate grading approximately 100 grams Au and 606 grams

Ag per tonne, for an aggregate total of approximately 610 troy ounces Au and 3,702 troy ounces Ag. On January 10, 2017, the Company shipped a further 296 dry metric tonnes of gold and silver concentrate grading 97 grams Au and 535 grams Ag per tonne, for an aggregate total of approximately 925 troy ounces Au and 5,102 troy ounces Ag. For the year ended December 31, 2016, the Company received \$1,088,255 in recoveries from the sale of concentrate and incurred sales and processing costs of \$867,741 after distributing proceeds to Gavin Mines under terms of the Milling and Profit Share Agreement post final payment based on confirmation of grade and weight. On April 6, 2017, the Company entered into a long-term Mining and Milling Profit Share Agreement with Gavin Mines. The mill feed will be material mined from Gavin Mine's Dome Mountain, which is located near Houston, British Columbia. Gavin Mines has agreed to ship up to 40,000 tonnes of mill feed per year to the Merritt Mill. The Company anticipates receiving mill feed during the third quarter of 2017 and continues moving towards commissioning.

On December 14, 2016, the Company issued 3,500,000 flow-through shares for gross proceeds of \$700,000 to conduct a diamond drill program on its Thule Copper Property in 2017. On June 29, 2016, the Company commenced a diamond drill program focusing in on three key target zones: the Eric, the Embayment and the Titan Queen zones. On September 7, 2016, the Company announced a significant copper mineralization had been intersected on the Thule Copper Property by an intersection of 1.11% copper over 85.92 metres in THU-002, through the Embayment Zone, located approximately 1 km northwest of the past-producing Craigmont Mine. The drilling results support the Embayment Zone as a fault-offset, westward continuation of the skarn zone that hosts the Craigmont deposit. On January 23, 2017, the Company announced results of historic and resampled diamond drill core from Hole S-100 originally drilled in January 1978 on the Embayment target. The results of the historic sampling of S-100 include sections of 0.92% Cu over 61.9 metres within a section of 116.7 metres grading 0.54%. A Notice of Work exploration permit application was filed with the Ministry of Energy and Mines in March 2017. The 2017 drilling program has been developed and is designed to determine continuity of mineralization further west along strike and at depth from THU-002 and S100. The Company has yet to receive the Notice of Work but anticipates receipt in the third quarter of 2017 following regular meetings held with both the Ministry of Energy and Mines ("MEM") and Ministry of Forest, Lands, Natural Resource Operations and Rural Development ("FLNR") during the summer of 2017. The delay in receiving final permit approval is attributed to record setting forest fires in British Columbia that has caused government staff to focus on firefighting efforts. The fires include bush and forest fires in the Thompson Nicola Regional District areas ("TNRD"). The conditions have impacted all Notice of Work approvals and resulted in a total ban of all exploration, logging and recreational activities in the TNRD. FLNR activities since early July, 2017 have all been directed to fire supervision duties throughout the 2017 summer months and this continues at this time impacting consultation referrals for approvals to MEM to process Notice of Works. Drilling at the Titan Queen Zone in 2016 encountered alteration and mineralization features commonly observed in association with porphyry-style copper deposits, including the Highland Valley porphyry complex located 50 km north of the Thule Copper Property. Geological mapping of the Titan Queen area was completed in the fall of 2016 to help delimit an exploration target area. In April, 2017 a Notice of Work exploration permit application was filed with the Ministry of Energy and Mines for an Induced Polarization (IP) geophysical survey and a drill program (if warranted by IP survey results). It is anticipated the IP survey will be conducted in the third quarter of 2017. The Company commissioned Dr. J. Lajoie (PhD), a geophysicist with extensive experience with IP surveys and data interpretation to review historical 3-dimensional IP survey data from the Promontory Hill area collected in 2005 by Frontier Geosciences Inc. The Promontory Hill area is located southwest of the Craigmont open pit. The review necessitated re-processing historical data and revision to the original chargeability and resistivity inversion models. Re-processed data revealed a chargeability anomaly that was not evident in the original processed data. Scott Geophysics Ltd was engaged to conduct a 2-dimensional IP survey in July 2017 to validate the anomalies present in the re-processed historical data. The new survey comprised of a total of eleven line kilometers in two east-west lines and one north-south line confirmed a clear anomaly located approximately 100 metres below surface. On July 24, 2017 the Company released results of this IP. In his Technical Report, dated July 15, 2017, Dr. J. Lajoie stated,

"The geophysical signatures accumulated thus far in the program are suggestive of the higher reaches of a porphyry system, with the Craigmont skarn deposit being the distal expression of

that. In such systems, the strongest IP highs are commonly due to higher concentrations of pyrite, with the Cu mineralization located elsewhere within more moderate IP.”

During July 2017 F. Devine (M.Sc.) conducted lithologic and mineral alteration mapping over the Promontory Hill area and outlined previously unrecognized silica-pyrite alteration corresponding to an area of low magnetic response in the vicinity of the IP anomaly. The newly acquired geophysical and geological data supports the existence of a porphyry target in the Promontory Hills area. The Company is planning further IP surveys and mapping in the third quarter of 2017 focussing on the 2 km trend to the south-west identified during the summer of 2017.

Risk Factors

The Company may be unable to meet its liquidity requirements for operations

There can be no assurance that the amounts of cash from operations, together with amounts raised through financings will be sufficient to fund the Company's ongoing operations and care and maintenance program. If these amounts are insufficient to meet the Company's liquidity requirements, it may have to seek additional financing. There can be no assurance that such additional financing would be available or, if available, offered on acceptable terms. Failure to secure any necessary additional financing would have a material adverse impact on the Company's continued operations and viability.

Mineral Exploration and Development Activities are Inherently Risky

The business of exploration for minerals and mining involves a high degree of risk. Few properties that are explored are ultimately developed into mineral deposits with significant value. Unusual or unexpected ground conditions, geological formation pressures, fires, power outages, labour disruptions, flooding, earthquakes, explorations, cave-ins, landslides and the inability to obtain suitable adequate machinery, equipment or labour are other risks involved in the operation of mines and the conduct of exploration programs. There are also physical risks to the exploration personnel working on the site of a mineral project. The Company's exploration properties and any future mining operations will be subject to all the hazards and risks normally incidental to exploration, development and production of silver and other metals, any of which could result in damage to or destruction of exploration facilities or mines, damage to life and property, environmental damage and possible legal liability for any or all damage. Although the Company maintains insurance in an amount, which it considers adequate, the nature of these risks is such that liabilities could exceed policy limits, in which event the Company could incur significant costs that could have a materially adverse effect upon its financial condition.

Uncertainty of Mineral Resources

The figures for mineral resources for the Treasure Mountain Project disclosed in the Company's Annual Information Form for the year ended December 31, 2012 and in its technical report filed on SEDAR on June 12, 2012, are only estimates. Mineral reserves at the Treasure Mountain Project have not been defined therefore the mineral resources currently cannot be considered ore. In addition, there are no mineral reserves at the Thule Copper Property. There is no certainty that any expenditure's made in the exploration of the Company's mineral properties will result in identification of commercially recoverable quantities of ore or that ore reserves will be mined or processed profitably. In addition, substantial expenditures will be required to develop the mining and processing facilities and infrastructure at any site chosen for mining.

Uncertainty of Economic Viability of Production from the Treasure Mountain Project

The Company has not undertaken any preliminary economic assessment or preliminary feasibility study with respect to the Treasure Mountain Project or any of its other projects and does not intend to undertake such a study or assessment. There are significant risks associated with making a production

decision without a valid, current, economic analysis and the Company may subsequently determine that recommencing operations at the Treasure Mountain Project is not economically feasible.

Insurance

The mining industry is subject to significant risks that could result in damage to or destruction of property and facilities, personal injury or death, environmental damage and pollution, delays in production, expropriation of assets and loss of title to mining claims. No assurance can be given that insurance to cover the risks to which the Company's activities are subject will be available at all or at commercially reasonable premiums. The Company currently maintains insurance within ranges of coverage that it believes to be consistent with industry practice for companies of a similar stage of development, however the insurance the Company has may not be sufficient to cover the full extent of any liabilities that may arise.

Prices, Markets and Marketing of Silver and Metal Prices

World prices for commodities fluctuate and are affected by numerous factors including international economic and political trends, expectations of inflation, currency exchange fluctuations, interest rates, global or regional consumptive patterns, speculative activities and increased production due to new mine developments and improved mining and production methods. The effect of these factors on the price of commodities, and the resulting impact on the viability of any of the Company's exploration projects, cannot accurately be predicted.

Liquidity and Capital Requirements

The Company has a significant working capital deficit, no history of profitable operation and no assurance that additional funding will be available to it for further exploration and development of any of its projects. The Company may also need further financing if it decides to obtain additional mineral properties or upgrade the Merritt Mill. As such, the Company is subject to many risks common to exploration enterprises, including undercapitalization, cash shortages and limitations with respect to personnel, financial and other resources, and lack of revenues. Although the Company has been successful in the past in obtaining financing through credit facilities or the sale of equity securities, there can be no assurance that the Company will be able to obtain adequate financing in the future or that the terms of such financing will be favorable. Such means of financing typically result in dilution of the positions of existing shareholders, either directly or indirectly. Failure to obtain additional financing could result in the delay or indefinite postponement of further exploration and development of its mineral properties, the loss of substantial dilution of any of its property interests or all the liquidation of all of its assets.

Going Concern Risk

As at June 30, 2017, the Company had an accumulated deficit of \$80,184,799 (December 31, 2016 - \$78,422,413) and working capital deficiency of \$10,077,668 (December 31, 2016 - \$8,587,430). These factors represent a material uncertainty that may cast doubt about the Company's ability to continue as a going concern. In order to continue operations, the Company will be required to raise funds through the issuance of equity or debt, or be successful recommencing operations at the Treasure Mountain Project, and maintaining on-going pre-commission custom milling at the Merritt Mill. Realization values may be substantially different from carrying values as shown and the Company's consolidated financial statements do not give effect to adjustments that would be necessary to the carrying values and classification of assets and liabilities should the Company be unable to continue as a going concern.

The unaudited condensed consolidated interim financial statements for the three and six months ended June 30, 2017 were prepared using IFRS, as applied by the Company prior to the filing for CCAA. These unaudited condensed consolidated interim financial statements have been prepared using the going concern concept, which assumes that the Company will be able to realize its assets and discharge its liabilities in the normal course of business for the foreseeable future.

Management believes that these actions continue to make the going concern basis appropriate. However, it is not possible to predict whether the Company will be able to raise the working capital required for maintaining the care and maintenance program at the Treasure Mountain Project, continued custom milling operations at the Merritt Mill to commissioning, continued exploration programs for Thule Copper Property and accordingly, substantial doubt exists as to whether the Company will be able to continue as a going concern.

If the "going concern" assumption were not appropriate for such financial statements, then significant adjustments would be necessary in the carrying amounts and/or classification of assets and liabilities.

Dependence on Management

The Company is very dependent upon the personal efforts and commitment of its existing management. To the extent that management's services would be unavailable for any reason, a disruption to the operations of the Company could result, and other persons could be required to manage and operate the Company.

Environmental Risks

All phases of the mineral exploration and development business present environmental risks and hazards and are subject to environmental regulations. Compliance with such legislation and regulations can require significant expenditures and a breach could result in the imposition of fines and penalties, some of which may be material. Environmental legislation is evolving in a manner which may lead to stricter standards and enforcement, larger fines and liability and potentially increased capital expenditures and operating costs. No assurance can be given that the application of environmental laws to the business and operations of the Company will not result in a curtailment of exploration or production, a material increase in the costs of production, development or exploration activities, or otherwise adversely affect the Company's financial condition, results of operations or prospects.

Government Regulation

The natural resource exploration industry is subject to controls and regulations imposed by various levels of government. It is not expected that any of these controls or regulations will affect the operations of the Company in a manner materially different than they would affect other natural resource exploration companies of similar size. The current legislation is a matter of public record and the Company is unable to predict what additional legislation or amendments may be enacted.

Indigenous Peoples' title claims and rights to consultation and accommodation may affect our existing operations as well as development projects and future acquisitions.

Governments in many jurisdictions must consult Indigenous Peoples with respect to grants of mineral rights and the issuance or amendment of exploration and project authorizations. Consultation and other rights of Indigenous Peoples may require accommodations, including undertakings regarding financial compensation, employment and other matters in impact and benefit agreements. This may affect our ability to acquire, explore or develop, within a reasonable time frame, mineral titles in these jurisdictions and may affect the timetable and costs of development of mineral properties in these jurisdictions. The risk of unforeseen aboriginal title claims also could affect existing operations as well as exploration and development projects and future acquisitions. These legal requirements may increase our operating costs and affect our ability to expand our operations or to explore and develop new projects.

Competition

The mining industry is intensely competitive in all its phases, and the Company competes with other companies that have greater financial resources and technical capacity. Competition could adversely

affect the Company's ability to acquire suitable properties or prospects in the future. The Company also competes with other mining companies in the recruitment and retention of qualified employees.

Conflicts of Interest

The Company's directors and officers may serve as directors or officers of, or may be associated with, other reporting companies or have significant shareholdings in other public companies. To the extent that such other companies may participate in business or asset acquisitions, dispositions, or ventures in which the Company may participate, the directors and officers of the Company may have a conflict of interest in negotiating and concluding terms respecting the transaction. If a conflict of interest arises, the Company will follow the provisions of the *Business Corporations Act* (British Columbia) and any other applicable laws and rules dealing with conflicts of interest. These provisions state that where a director has such a conflict, that director must, at a meeting of the Company's directors, disclose his interest and refrain from voting on the matter unless otherwise permitted by the *Business Corporations Act* (British Columbia). In accordance with the laws of the Province of British Columbia, the directors and officers of the Company are required to act honestly, in good faith and in the best interests of the Company.

No Current Plans to Pay Cash Dividends

The Company has no plans to pay any cash dividends for the foreseeable future. Any decision to declare and pay dividends in the future will be made at the discretion of the Company's Board of Directors and will depend on, among other things, the Company's financial results, cash requirements, contractual restrictions and other factors that the Board of Directors may deem relevant. In addition, the Company's ability to pay dividends may be limited by covenants of any existing and future outstanding indebtedness that the Company or its subsidiaries incur. As a result, investors may not receive any return on an investment in the Company's securities unless they sell the securities for a price greater than that which they paid for them.

Economic Conditions

Unfavourable economic conditions may negatively impact the Company's financial viability. Unfavourable economic conditions could also increase the Company's financing costs, decrease estimated income from prospective mining operations, limit access to capital markets and negatively impact the availability of credit facilities or other financing to the Company.

Price Volatility of Public Stock

The market price of the Company's securities has experienced wide fluctuations, which may not necessarily be related to the operating performance, underlying asset values or prospects of the Company. Any market for the Company's securities may be subject to market trends generally and the value of the Company's securities on the Exchange may be affected by such volatility in response to numerous factors, many of which are beyond the Company's control, including:

- actual or anticipated fluctuations in the Company's quarterly results of operations;
- changes in the economic performance or market valuations of other companies that investors deem comparable to the Company;
- the addition or departure of the Company's executive officers or other key personnel;
- release or other transfer restrictions on outstanding Company securities;
- sales or perceived sales of additional Company securities;

- significant acquisitions or business combinations, strategic partnerships, joint ventures or capital commitments by or involving the Company or its competitors;
- news reports relating to trends, concerns, competitive developments or regulatory changes; and
- other related issues in the Company's industry or target markets.

Financial markets continue to experience significant price and volume fluctuations that have particularly affected the market prices of equity securities of companies and that have, in many cases, been unrelated to the operating performance, underlying asset values or prospects of such companies. Accordingly, the market price of the Company's securities may decline even if the Company's operating results, underlying asset values or prospects have not changed.

Additionally, these factors, as well as other related factors, may cause decreases in asset values that are deemed to be other than temporary, which may result in impairment losses. As well, certain institutional investors may base their investment decisions on consideration of the Company's environmental, governance and social practices and performance against such institutions' respective investment guidelines and criteria, and failure to meet such criteria may result in limited or no investment in the Company's securities by those institutions, which could adversely affect the trading price of the Company's securities. There can be no assurance that fluctuations in price and volume will not occur in the future. If increased levels of volatility and market turmoil occur, the Company's operations may be adversely impacted and the trading price of the Company's securities may be adversely affected.

Regulatory and Permitting

Regulatory and permitting requirements have a significant impact on the Company's operations and can have a material and adverse effect on future cash flow, results of operations and financial condition. In order to conduct mineral exploration and mining activities the Company must obtain or renew exploration or mining permits and licenses in accordance with the relevant mining laws and regulations required by governmental authorities having jurisdiction over mineral projects. There is no guarantee that the Company will be granted the necessary permits and licenses, that they will be renewed, or that the Company will be in a position to comply with all the conditions that are imposed. Mining is subject to potential risks and liabilities associated with pollution and the disposal of waste from mineral exploration and mine operations. Costs related to discovery, evaluation, planning, designing, developing, constructing, operating, closing and remediating mines and other facilities in compliance with these laws and regulations are significant. In addition to environmental protection, applicable laws and regulations govern employee health and safety. Not complying with these laws and regulations can result in enforcement actions that may include corrective measures requiring capital expenditures, installation of additional equipment, remedial action and changes to operating procedures resulting in additional costs and temporary or permanent shutdown of operations. The Company may also be required to compensate those parties suffering loss or damage and may face civil or criminal fines or penalties for violating certain laws or regulations. Changes to these laws and regulations in the future could have an adverse effect on the Company's cash flow, results of operations and financial condition. Further, the issuance of permits may be subject to review by third parties who may challenge future permitting and the validity of existing permits based on, among other things, the government's obligation to consult and accommodate.

Forward-Looking Statements may Prove Inaccurate

Investors are cautioned not to place undue reliance on forward-looking statements contained in this MD&A. By their nature, forward-looking statements involve numerous assumptions and known and unknown risks and uncertainties, of both a general and specific nature, that could cause actual results to differ materially from those suggested by the forward-looking statements, or contribute to the possibility that predictions, forecasts or projections will prove to be materially inaccurate. Additional information on the risks, assumptions and uncertainties are found in this MD&A under the heading "Cautionary Note Regarding Forward-Looking Statements".

RESULTS OF OPERATIONS AND FINANCIAL CONDITION

This review of the Company's results of operations should be read in conjunction with the unaudited condensed consolidated interim financial statements of the Company for the three and six months ended June 30, 2017 and the audited consolidated financial statements of the Company for the year ended December 31, 2016.

Three Months Ended June 30, 2017

During the three months ended June 30, 2017, the Company recorded a net loss and comprehensive loss of \$905,986 compared to a net loss and comprehensive loss of \$1,184,810 for the comparable period of 2016. The significant fluctuations between the two periods were decreases in exploration costs to \$81,805 in the three months to June 30, 2017, from \$102,005 for the comparable period in 2016, mill costs to \$208,786 in the three months to June 30, 2017, from \$354,921 for the comparable period in 2016, consulting fees to \$75,415 in the three months to June 30, 2017, from \$158,600 for the comparable period in 2016, and share-based compensation expense to \$nil in the three months to June 30, 2017 from \$154,757 for the comparable period in 2016. The decreases were offset by increased finance costs to \$430,326 in the three months to June 30, 2017, from \$361,379 for the comparable period in 2016.

Operating expenses for the three months ended June 30, 2017 decreased to \$483,957 from \$831,224 for the comparable period due to decreases in exploration costs to \$81,805 from \$102,005, mill costs to \$208,786 from \$354,921, consulting fees to \$75,415 from \$158,600, share-based compensation expense to \$nil from \$154,757, offset by increases in travel and investor relations costs to \$18,853 from \$2,257 and accretion costs to \$17,741 from \$nil for the comparable periods.

For the three months ended June 30, 2017, general and administrative costs decreased to \$175,625 as compared to \$374,298 for the same three months ended June 30, 2016 due to decreases in consulting fees to \$75,415 from \$158,600, share-based compensation expense to \$nil from \$154,757, offset by increases in travel and investor relations to \$18,853 from \$2,257 for the comparable periods.

Finance costs for the three months to June 30, 2017 were \$430,326 compared to \$361,379 for the three months ended June 30, 2016. The increases were interest accrual for flow-through share obligation of \$38,383 for the three months ended June 30, 2017 together with increased accretion of convertible debentures to \$25,637 from the comparable period.

Six Months Ended June 30, 2017

During the six months ended June 30, 2017, the Company recorded a net loss and comprehensive loss of \$1,762,386 compared to a net loss and comprehensive loss of \$1,894,651 for the comparable period of 2016. The significant fluctuations between the two periods were increases in exploration costs to \$154,433 in the six months to June 30, 2017, from \$145,148 for the comparable period in 2016, and finance costs to \$845,299 in the six months to June 30, 2017, from \$706,074 for the comparable period in 2016. The increases were offset by decreases in mill costs to \$382,957 in the six months to June 30, 2017, from \$516,013 for the comparable period in 2016, share-based compensation expense to \$nil in the six months to June 30, 2017, from \$155,531 for the comparable period in 2016, and consulting fees to \$169,988 in the six months to June 30, 2017, from \$233,960 for the comparable period in 2016.

Operating expenses for the six months ended June 30, 2017 decreased to \$935,684 from \$1,210,305 for the comparable period due to increases in exploration costs to \$154,433 from \$145,148, increases in accretion costs to \$35,482 from \$nil, increases in travel and investor relations to \$36,547 from \$3,079, offset by decreases in mill costs to \$382,957 from \$516,013, decreases in consulting fees to \$169,988 from \$233,960, decreases in share-based compensation expense to \$nil from \$155,531 for the comparable period in 2016.

For the six months ended June 30, 2017, general and administrative costs decreased to \$362,812 as compared to \$549,144 for the same six months ended June 30, 2016 due to decreases in consulting fees to \$169,988 from \$233,960 and share-based compensation expense to \$nil from \$155,531 for the comparable periods. The decreases were offset by increases in travel and investor relations to \$36,547 from \$3,079 for the comparable period.

Finance costs for the six months to June 30, 2017 were \$845,299 compared to \$706,074 for the six months ended June 30, 2016. The increases were interest accrual for flow-through share obligation of \$76,766 for the six months ended June 30, 2017 together with increased accretion of convertible debentures to \$60,861 from the comparable period.

SELECTED QUARTERLY RESULTS

The following table provides selected unaudited financial information for the most recent eight quarters. All amounts shown are stated in Canadian dollars in accordance with IFRS.

	June 30, 2017 (\$)	March 31, 2017 (\$)	December 31, 2016 (\$)	September 30, 2016 (\$)	June 30, 2016 (\$)	March 31, 2016 (\$)	December 31, 2015 (\$)	September 30, 2015 (\$)
Net loss	(905,986)	(856,400)	(929,531)	(1,436,192)	(1,184,810)	(710,895)	(1,159,044)	(808,883)
Loss per share from continuing operations (basic and diluted) ⁽¹⁾	(0.01)	(0.01)	(0.01)	(0.01)	(0.01)	(0.01)	(0.01)	(0.01)

⁽¹⁾ Loss per share from continuing operations (basic and diluted) has been calculated as if the consolidations of share capital effective July 17, 2014 and June 1, 2015 had been in place for all periods reported.

The increase in net loss for the quarter ended June 30, 2017 compared to quarter ended March 31, 2017 was due to Thule Copper exploration program with commencement of mapping and IP projects, and continued modifications to the Merritt Mill in preparation for processing the Gavin Mines mill feed in the third quarter of 2017.

The decrease in net loss for quarter ended March 31, 2017 compared to quarters ended December 31, September 30 and June 30, 2016 was due to the completion of both the exploration program at Thule Copper Property in September 2016 and testing of the approximately 6,000 tonnes milling and smelting profit share agreement with Gavin Mines into mid-November, 2016.

The decrease in net loss for quarter ended December 31, 2016 compared to quarter December 31, 2015 was due to reduced finance costs, and care and maintenance costs at Merritt Mill.

The increase in net loss for the quarters ended June 30 and September 30, 2016 compared to the quarters ended June 30, and September 30, 2015 was due to testing at the Merritt Mill together with the Thule Copper Property diamond drilling program during 2016. An extensive reclamation program was completed at the Treasure Mountain Project in September 2016. Additional issuance of stock options, share based compensation, and consulting fees reflect continued marketing of the Company to the financial community culminating in raising significant working capital during 2016.

The decrease in net loss for the quarter ended March 31, 2016 compared to the quarter ended December 31, 2015 was largely due to increased finance costs incurred in the December 2015 quarter with respect to the Debentures due to increasing the interest rate from 10% to 12% and payment in shares for the first year term of the Debentures. In addition, the consulting fees, regulatory and transfer agent fees increased in the quarter ended December 31, 2015 due to the November 2015 financing, restructuring of the Waterton debt obligation, and exiting CCAA.

FINANCING, LIQUIDITY AND CAPITAL RESOURCES

As of June 30, 2017, the Company had a working capital deficiency of \$10,077,668 that included cash and cash equivalents of \$1,540,637 as compared to a working capital deficiency of \$8,587,430 and cash and cash equivalents of \$1,916,458 as at December 31, 2016. The working capital deficiency is attributable to the cash requirements needed to operate the Company during the first and second quarters of 2017, expenditures relating to the flow-through exploration program on the Thule Copper Property, modifications to the Merritt Mill, secured convertible debentures in the amounts of \$7,077,810 due in November, 2017 and \$228,225 due in May, 2018.

Cash used in operating activities for the six months ended June 30, 2017 was \$782,167 compared to \$1,155,121 for the six months ended June 30, 2016. The decrease in cash used in operating activities was due to nil share-based compensation, and receivables from final settlement of sale of concentrate derived from the Mining and Milling Profit Share Agreement with Gavin Mines.

Cash used by investing activities was \$205,400 for the six months ended June 30, 2017 compared cash provided of \$4,441 for the six months ended June 30, 2016. The Company continued modifications and purchase of equipment during the period at the Merritt Mill.

Cash provided by financing activities was \$611,746 for the six months ended June 30, 2017 compared to \$1,055,535 for the six months ended June 30, 2016. 4,089,208 share purchase warrants were exercised together with 200,000 stock options during the six months with net proceeds of \$624,245.

The Company had the following major cash obligations as of June 30, 2017:

- Repayment of the amounts owing under the amended Settlement Agreement with Waterton (as described above) in the amount of \$1,310,705; and
- Repayment of amounts owing to holders of the Secured convertible debentures in the amount of \$7,306,035.

As at June 30, 2017, the Company had an accumulated deficit of \$80,184,799 (December 31, 2016 \$78,422,413) and a working capital deficiency of \$10,077,668 (December 31, 2016 - \$8,587,430). However, additional funds will be needed for the development of the Treasure Mountain Project, Thule Copper Property and Merritt Mill. Realization values may be substantially different from carrying values as shown and the Company's consolidated financial statements which do not give effect to adjustments that would be necessary to the carrying values and classification of assets and liabilities should the Company be unable to continue as a going concern. Further, the failure to make the payments outstanding to Waterton could materially change the carrying amounts and classifications reported in the consolidated financial statements.

The unaudited condensed consolidated interim financial statements for the three and six months ended June 30, 2017 were prepared using IFRS, as applied by the Company prior to and after exiting CCAA. These unaudited condensed consolidated interim financial statements have been prepared on a going concern basis, which assumes that the Company will be able to realize its assets and discharge its liabilities in the normal course of business for the foreseeable future. However, there are substantial payment obligations remaining in connection with Waterton and the subordinated secured convertible debentures and, as such, there is substantial doubt regarding the realization of assets and discharge of liabilities. Due to the amendment to the Settlement Agreement with Waterton dated October 23, 2015, the various financings completed between November 2015 and December 2016, testing milling operations at the Merritt Mill in June 2016 till November 2016, and successful flow-through financing in December, 2016 for continued Thule Copper exploration in 2017, management believes that these actions make the going concern basis determination appropriate. However, there are substantial payments remaining to Waterton and the holders of the secured convertible debentures, and accordingly substantial doubt exists as to whether the Company will be able to continue as a going concern. Further, it is not possible to

predict whether the actions taken in the restructuring, financing and operational activities will result in improvements to the financial condition of the Company sufficient to allow it to continue as a going concern. If the Company were to be forced into bankruptcy resulting in the liquidation of its assets, adjustments would be necessary to the carrying amounts and/or classification of assets and liabilities, in the Company's consolidated financial statements. If the "going concern" assumption were not appropriate for such financial statements, then significant adjustments would be necessary in the carrying amounts and/or classification of assets and liabilities.

OUTLOOK

The Company continues to consider rationalizing its non-core assets, moving towards leveraging the value of its core assets in an effort to generate operational cash flow.

On September 7, 2016, the Company announced a significant copper mineralization has been intersected on the Thule Copper Property. The 2016 diamond drilling program commenced on June 29, 2016 and all five holes totalling 1,084 metres of drilling intersected copper mineralization. The highlight was an intersection in the Embayment Zone of 1.11% copper over 85.92 metres in hole THU-002. In addition, drilling at the Titan Queen Zone encountered alteration and mineralization features commonly observed in association with porphyry-style copper deposits, including the Highland Valley porphyry complex located 50 km north of the Thule Copper Property. On January 23, 2017, the Company announced results of historic and resampled diamond drill core from Hole S-100 originally drilled in January 1978 on the Embayment target. The results of the historic sampling of S-100 include sections of 0.92% Cu over 61.9 metres within a section of 116.7 metres grading 0.54%.

A Notice of Work ("NOW") exploration permit application was filed with the Ministry of Energy and Mines in March of 2017, which includes an application for a diamond drill program that is designed to determine continuity of mineralization further west along strike and at depth from THU-002 and S-100. Concurrent to the diamond drill program application, a NOW was filed to conduct further geophysical survey work on the Titan Queen. The IP application for Titan Queen is to follow up on the 2016 diamond drilling and a geological mapping program results that were as completed in the fall of 2016. The IP survey will be followed up by a drill program contingent on the results of the IP survey. In November 2016, a review of historical geophysical data by Dr. J. Lajoie revealed a chargeability anomaly that was not recognised during the original work in 2005 in the Promontory Hill area. Promontory Hill is a prospective area located southwest of the Craigmont open pit. In response, the Company engaged Scott Geophysics to verify the anomaly by completing two east-west lines and one north-south line for a total of eleven line kilometres over the anomaly identified in the re-processed 2005 IP data. The survey confirmed the position of a chargeability anomaly in the re-processed 2005 data and provided better resolution on depth to the anomaly of approximately 100 metres below surface. On July 24, 2017 the Company released results of the IP survey over Promontory Hill.

During July 2017 lithologic and mineral alteration mapping was conducted over the Promontory Hill by Fionnuala Devine M.Sc. that resulted in the identification of previously unrecognized silica-pyrite alteration corresponding to an area low magnetic response. The coincidence of the newly identified 2D IP chargeability anomaly silica-pyrite alteration, and the overall increasing intensity towards known occurrences of a diorite intrusion (termed the Coyle Diorite) 2 km along trend to the south-west support the existence of previously unrecognized porphyry center in the Promontory Hill part of Thule property. The Company is planning further IP surveys and mapping in the third quarter of 2017 focussing on the 2 km trend to the south-west identified during the summer of 2017.

The Company is currently working with HVCP to conduct an exploration program on historic mine dump material on the property in order to gather information regarding the grade and other characteristics of the mine dump material. Following the exploration campaigns, anticipated to commence during 2017, HVCP will have the right to purchase mine dump material. The Company will carry out the exploration program, and HVCP has agreed to reimburse the Company at least \$200,000 for costs related to the exploration programs.

On April 6, 2017, the Company entered into a long-term Mining and Milling Profit Share Agreement with Gavin Mines. The mill feed will be material mined from Gavin Mine's Dome Mountain, which is located near Houston, British Columbia. Gavin Mines has agreed to ship up to 40,000 tonnes of mill feed per year to the Merritt Mill.

Treasure Mountain Project

Nicola's Treasure Mountain Project is located northeast of Hope, British Columbia, approximately 3 hours from Vancouver, British Columbia. The Company's claim holdings at the Treasure Mountain Project consist of 51 mineral tenures, comprising 21 legacy claims, 100 cell units, one Crown grant and 5 district lots, for a total of approximately 2,850 hectares (7,000 acres), of which 335 hectares are now under a mining lease.

In November 2011, the Company completed the development of the required infrastructure at the Treasure Mountain Project to begin underground mining on a 10,000 tonne bulk sample permit. In May 2012, the Company received a mining lease covering 335 hectares of active workings out of 7,000 acres of mineral tenures at the Treasure Mountain Project and a Mines Act permit for the Treasure Mountain Project for the removal of 60,000 tonnes per year of silver/lead/zinc mill feed from the underground mine and the transfer of the mill feed offsite for processing. The Treasure Mountain Project has been in care and maintenance since July 26, 2013. The Company intends to keep the Treasure Mountain Project on care and maintenance and continues to review options for the Treasure Mountain Project, including a review of merger and acquisition opportunities, future exploration, and recommencing mining activity.

To date, the majority of the Company's mineral resources have been classified as Inferred, whereby the economic viability of such resources cannot be determined. The removal of mineralized material from the Company's Treasure Mountain Project is considered an exploration and evaluation activity, and as such, all costs associated with the removal of this mill feed are expensed as exploration costs. Currently, no value has been assigned to any stockpiled mineralized material as the removal is considered an exploration and evaluation activity.

Merritt Mill Property and Thule Copper Property

The Merritt Mill is located in south central British Columbia, approximately 14 kilometres west of Merritt, British Columbia. The Company constructed a mill facility on the permitted site of the former Craigmont Copper producing mine (1962-1982) to process the material from the Treasure Mountain Project, which is located approximately 70 kilometres away. The Company's claim holdings at the Merritt property consist of 20 contiguous mineral claims covering approximately 10,084 hectares (20,898 acres), 10 mineral leases covering approximately 347 hectares (858 acres) known as Thule Copper Property, and 6 district wholly-owned freehold lots covering approximately 391 hectares (966 acres).

The Company underwent the necessary engineering and environmental work to file a permit amendment application to the existing Mines Act permit on October 31, 2011. The British Columbia Mines Act mill construction and operation permit was received on May 18, 2012. The Company began the civil work on the Mill Property in early November 2011, which was completed in November 2012. The first concentrate shipments were made from the Merritt Mill on November 22, 2012 under the previously announced concentrate purchase agreements. From November 12, 2012 to June 26, 2013, the Merritt Mill was fully staffed and was operating 24 hours a day, 7 days a week. On June 26, 2013, the Merritt Mill was put on care and maintenance. On July 31, 2015, the Company filed a permit amendment application to the existing Mines Act permit for custom milling at the Merritt Mill. The British Columbia Mines Act custom milling operations permit was received on April 15, 2016. On June 16, 2016, the Company commenced testing custom milling operations and on August 9, 2016 commenced shipping gold and silver concentrates and entered into an off take agreement. On September 15, 2016, the Company shipped a total of 190 dry metric tonnes of gold and silver concentrate grading approximately 100 grams Au and 606 grams Ag per tonne, for an aggregate total of approximately 610 troy ounces Au and 3,702 troy ounces Ag. On January 10, 2017, the Company shipped a further 296 dry metric tonnes of gold and silver concentrate grading 97 grams Au and 535 grams Ag per tonne, for an aggregate total of approximately

925 troy ounces Au and 5,102 troy ounces Ag. For the year ended December 31, 2016, the Company received \$1,088,225 in recoveries from the sale of concentrate and incurred sales and processing costs of \$867,741 after distributing proceeds to Gavin Mines under terms of the Milling and Profit Share Agreement post final payment based on confirmation of grade and weight. On April 6, 2017 the Company entered into a long-term Mining and Milling Profit Share Agreement with Gavin Mines. The mill feed will be material mined from Gavin Mine's Dome Mountain which is located near Houston, British Columbia. Gavin Mines has agreed to ship up to 40,000 tonnes of mill feed per year to the Merritt Mill.

On November 19, 2015, the Company entered an agreement with former shareholders of the Company's wholly-owned subsidiary, Huldra Properties Inc., pursuant to which the former shareholders agreed to transfer an aggregate of 499 common shares of the Company's subsidiary, Thule, to the Company. The acquisition of the Thule Shares resulted in the Company being the sole shareholder of Thule. In consideration of the foregoing, the Company agreed to grant to Aberdeen ventures Inc., one of the former shareholders, a 2.0% net smelter royalty with respect to certain mineral claims and leases held by Thule.

On September 7, 2016, the Company completed a 1,084 metre diamond drill program with all five holes intersecting copper mineralization on all three zones at the Thule Copper Property. The Company announced 1.11% copper over 85.92 metres was intersected at the Embayment Zone and alteration and mineralization features commonly observed in association with porphyry-style copper deposits was encountered at the Titan Queen Zone. On January 23, 2017, the Company announced results of historic and resampled diamond drill core from Hole S-100 originally drilled in January, 1978 on the Embayment target. The results of the historic sampling of S-100 include sections of 0.92% Cu over 61.9 metres within a section of 116.7 metres grading 0.54%. A Notice of Work exploration permit application was filed in March, 2017 with the Ministry of Energy and Mines that is designed to determine continuity of mineralization further west along strike and at depth from THU-002 and S-100. The porphyry-deposit style alteration and mineralization encountered in drilling at the Titan Queen Zone in 2016 was followed by geological mapping in the fall of 2016 to help delimit an exploration target area. In April, 2017 a Notice of Work exploration permit application was filed with the Ministry of Energy and Mines for an IP geophysical survey and a drill program (if warranted by IP survey results). It is anticipated the IP survey will be conducted in the third quarter of 2017.

The Company commissioned Dr. J. Lajoie (PhD), a geophysicist with extensive experience with IP surveys and data interpretation to review historical 3-dimensional IP survey data from the Promontory Hill area collected in 2005 by Frontier Geosciences Inc. The Promontory Hill area is located southwest of the Craigmont open pit. The review necessitated re-processing historical data and revision to original chargeability and resistivity inversion models. Re-processed data revealed a chargeability anomaly that was not evident in the original processed data. Scott Geophysics Ltd was engaged to conduct a 2-dimensional IP survey in July 2017 to validate the anomaly present in the re-processed 2005 historical data. The new survey comprised of a total of eleven line kilometres in two east-west lines and one north-south line confirmed a clear anomaly located approximately 100 metres below surface. In his technical Report dated July 15, 2017, Dr. J. Lajoie stated,

“The geophysical signatures accumulated thus far in the program are suggestive of the higher reaches of a porphyry system, with the Craigmont skarn deposit being the distal expression of that. In such systems, the strongest IP highs are commonly due to higher concentrations of pyrite, with the Cu mineralization located elsewhere within more moderate IP.”

During July 2017, lithologic and mineral alteration mapping was conducted over the Promontory Hill by F Devine M.Sc. and previously unrecognized silica-pyrite alteration corresponding to the low magnetic area, possibly increasing in intensity to the south west was outlined. The newly identified IP chargeability anomaly, previously unrecognized silica-pyrite alteration, and the overall increase alteration intensity towards known occurrences of a diorite (termed the Coyle Diorite) 2 km along trend to the south-west opens the possibility of a previously unrecognized porphyry target is located in the Promontory Hill area of the Thule property. The Company is planning further IP and mapping in the third quarter of 2017 focussing on the 2 km trend to the south-west identified during the summer of 2017.

RELATED PARTY TRANSACTIONS

During the six months ended June 30, 2017 and 2016, the Company incurred the following expenditures to related parties:

	Six months ended June 30	
	2017 (\$)	2016 (\$)
Consulting fees paid or accrued to directors (i), (ii)	90,000	90,000

(i) Peter Espig, Chief Executive Officer and director of the Company is paid a consulting fee of \$15,000 per month.

(ii) Included in accounts payables as at June 30, 2017 was \$Nil (December 31, 2016 - \$1,450) due to Peter Espig.

Key management personnel are those persons having authority and responsibility for planning, directing and controlling the activities of the Company, directly or indirectly, and consist of its directors, the Chief Executive Officer and the Chief Financial Officer. Key management personnel remuneration during the year ended December 31, 2016 included \$334,008 in share-based compensation expense (December 31, 2015 - \$48,851).

All related party transactions are in the normal course of business and are measured at the exchange amount.

OUTSTANDING SHARE DATA

Effective July 17, 2014, the Company completed a consolidation of its outstanding shares on the basis of one (1) post-consolidation share for two (2) pre-consolidation shares. Additionally, effective June 1, 2015, the Company completed a consolidation of its outstanding shares on the basis of one (1) post-consolidation share for five (5) pre-consolidation shares.

- Authorized and issued share capital as at August 29, 2017:

Class	Par Value	Authorized	Issued Number
Common	No par value	Unlimited	170,060,950

- As at August 29, 2017, there were 7,491,500 stock options outstanding.
- As at August 29, 2017, there were 58,268,851 warrants outstanding.

OFF BALANCE SHEET ARRANGEMENTS

The Company does not have any off balance sheet arrangements which may affect its current or future operations or conditions.

CHANGES IN ACCOUNTING POLICIES

The following is an overview of accounting standard changes the Company will be required to adopt in future years. The Company will not adopt any of these standards before their effective dates. The adoption of these standards is not expected to have a material impact on the Company's consolidated financial statements. Some updates that are not applicable or are not consequential to the Company may have been excluded from the list below.

IFRS 9 – Financial Instruments Disclosure

IFRS 9 *Financial Instruments* introduces new requirements for the classification and measurement of financial assets. IFRS 9 requires all recognized financial assets that are within the scope IAS 39 *Financial Instruments: Recognition and Measurement* to be subsequently measured at amortized cost or fair value. Specifically, financial assets that are held with a business model whose objective is to collect the contractual cash flows, and that have contractual cash flows that are solely payment of principal and interest on the principal outstanding, are generally measured at amortized cost at the end of subsequent accounting periods. All other financial assets including equity investment are measured at their fair values at the end of subsequent accounting periods. IFRS 9 amendments are tentatively effective for annual periods beginning on or after January 1, 2018.

IFRS 15 *Revenue from contracts with customers* will replace IAS 18 – *Revenue*, IAS 11 – *Construction contracts*, and related interpretations on revenue. IFRS 15 sets out the requirements for recognizing revenue that apply to all contracts with customers, except for contracts that are within the scope of the standards on leases, insurance contracts and financial instruments. IFRS 15 uses a control based approach to recognize revenue which is a change from the risk and reward approach under the current standard. Companies can elect to use either a full or modified retrospective approach when adopting this standard and it is effective for annual periods beginning on or after January 1, 2018.

IFRS 16 *Leases*, the new leases standard, is effective for periods beginning on or after January 1, 2019, with earlier adoption permitted if IFRS 15 has been also applied.

The Company has not yet completed the process of assessing the impact that IFRS 9, IFRS 15, and IFRS 16 will have on its consolidated financial statements, or whether to early adopt these new requirements.

FINANCIAL INSTRUMENTS

Fair Value

The Company records certain of its financial instruments at fair value using various techniques. These include estimates of fair values based on prevailing market prices (bid and ask prices, as appropriate) for instruments with similar characteristics and risk profiles or internal and external valuation models, such as discounted cash flow analyses, using, to the extent possible, observable market-based inputs.

The financial instruments have been characterized on a fair value hierarchy based on whether the inputs to those valuation techniques are observable (inputs reflect market data obtained from independent sources) or unobservable (inputs reflect the Company's market assumptions).

The three levels of fair value estimation are:

Level 1 – quoted prices in active markets for identical instruments.

Level 2 – quoted prices in active markets for similar instruments; quoted prices for identical or similar instruments in markets that are not active; and model-derived valuations in which all significant inputs and significant value drivers are observable in active markets.

Level 3 – valuations derived from valuation techniques in which one or more significant inputs or significant value drivers are unobservable.

Risk Exposure and Management

Overview

The Company has exposure to risks of varying degrees of significance which could affect its ability to achieve its strategic objectives. The principal financial risks to which the Company is exposed are credit risk, liquidity risk, metal price risk, and currency risk.

Credit Risk

Credit risk is the risk of financial loss to the Company if a customer or counterparty to a financial instrument fails to meet its obligations. The Company's maximum exposure to credit risk at the balance sheet date under its financial instruments is approximately \$1.5 million.

All of the Company's cash is held with a major financial institution in Canada and management believes the exposure to credit risk with respect to such institutions is not significant. Those financial assets that potentially subject the Company to credit risk are primarily receivables. The Company considers the risk of material loss to be significantly mitigated due to the financial strength of the parties from whom the receivables are due, including government organizations.

Liquidity Risk

Liquidity is the risk that the Company will not be able to meet its obligations associated with financial liabilities. The Company has a planning and budgeting process in place by which it projects the funds required to support its operations as well as care and maintenance, and if warranted, the exploration and development of its Treasure Mountain and Thule Copper properties, and continuing custom milling operations at its Merritt Mill.

There is no assurance that the Company will operate profitably or will generate positive cash flow in the future. The Company has a significant working capital deficiency, no history of profitable operations and no assurance that additional funding will be available to it for further exploration and development of the Treasure Mountain and Thule Copper properties and milling operations at its Merritt Mill. The Company may also need further financing if it decides to obtain additional mineral properties. As such, the Company is subject to many risks common to exploration enterprises, including undercapitalization, cash shortages and limitations with respect to personnel, financial and other resources and lack of revenues. Although the Company has been successful in the past in obtaining financing through credit facilities or the sale of equity securities, there can be no assurance that the Company will be able to obtain adequate financing in the future or that the terms of such financing will be favorable. Such means of financing typically result in dilution of the positions of existing shareholders, either directly or indirectly. Failure to obtain additional financing could result in the delay or indefinite postponement of further exploration and development of the Treasure Mountain and Thule Copper properties or the loss or substantial dilution of any of its property interests.

Foreign Exchange Rate Risk

The Company currently is not subject to significant foreign exchange risk.

The following is a summary of the maturities for the Company's non-derivative financial liabilities as at June 30, 2017:

	Less than 30 days (\$)	30 days to 1 year (\$)	1 year to 2 years (\$)	More than 2 years (\$)
